Homework 03

Build a system that can manage students' data such as student full name, student Id, student major, and the courses and its grades for each student.

Requirements:

1. Create a class called: students_management .

2. Create the needed constructor and functions such as add_student, delete_student, search_student, display_student, update_student.

3. Enter students' data by using input ()

4. Make those functions work properly

5. I want to be able to add or delete a student

6. I want to be able to look_up a student data and update it if needed.

7. Finally; show the most updated data of all the students.
